RSTC 17® · NITROGEN STABILIZER · CALIFORNIA ALMOND TRIAL, 2024

Pay for it with the nitrogen you're already buying.

Trim 25% of your UAN-32 to cover RSTC 17. In a Newman, CA almond trial, yields held up.

What happened in the orchard

Nuts per tree: 7,159 (75% N) · 8,081 (100% N) · 8,203 (75% N + RSTC 17) · 8,885 (100% N + RSTC 17). Kernel yield, lb/acre: 3,093 · 3,222 · 3,265 · 3,516.

THE TRIAL — WHERE & HOW

LOCATION
Newman, Stanislaus County, California

ORCHARD
45 acres, planted April 2015

VARIETY / ROOTSTOCK
Independence on Hanson-536

SPACING
21 × 14 ft · 148 trees/acre

PLOTS
4 rows × 104 trees per treatment (≈2.8 ac each)

RSTC 17 RATE
1 oz per gal of UAN-32, through the irrigation system

APPLICATIONS
March 29 and April 25, 2024

HARVEST SAMPLING
10 windrow locations per plot, Sept 2024

CONDUCTED BY
Barat Bisabri, Ph.D. & Ernesto Zamora, Bisabri Ag. Research and Consulting, Newman, CA

The per-acre math

Assumes 50 gal UAN-32/ac (≈177 lb N) at $600/ton ($3.32/gal) · RSTC 17 at $70/gal · almonds at $2.00/lb kernel

	RSTC 17 cost	N saved (25%)	Yield vs 100% N	Net / acre
A · Add it to your full N program 100% N + RSTC 17	–$27.34	—	+294 lb = +$588	**+$561**
B · Fund it from your N budget 75% N + RSTC 17, yield held equal	–$27.34	+$41.48	held equal	**+$14**
B · same, at measured yield 75% N + RSTC 17	–$27.34	+$41.48	+43 lb = +$85	**+$99**

Option B means no new line item in the fertilizer budget. The 25% of UAN-32 you don't buy (≈12.5 gal, ≈44 lb N per acre) pays for the RSTC 17 with about $14/acre to spare, and in the trial the 75% N + RSTC 17 plots were statistically equal in yield to the 100% N plots. Cutting N without RSTC 17 gave the lowest numerical yield in the trial.

How to use it

Rate: 1 oz of RSTC 17 per gallon of UAN-32 (label range: 1 oz per 1–2 gal of liquid fertilizer). The trial used 1 oz/gal at each application.
Mixing: agitate the product, then add to tank water or fertilizer with agitation. Jar-test before mixing with anything other than water.

Don't mix with products containing heavy metals. Use fertilizer blends right away; don't store them. Protect from freezing and direct sunlight.
Ask us about your nitrogen program and where a 25% trim fits.

One orchard, one season (2024). Treatment differences were tested at P=0.10; the researchers used the 10 sampling locations per plot as replicates and note these may not be true replicates. The 75% N + RSTC 17 plots were not statistically different from the 100% N plots. Your results will vary with soil, water, variety and management. RSTC 17 is a CarbonWorks product (CA label of CetaiN); label carries no warranty. Dollar figures are illustrations from the assumptions above.
