ZEL TEC Dry Biological Soil Amendment & Conditioner

Manufactured by AgVerra LLC | OMRI Certified Organic

PRODUCT OVERVIEW

Zel Tec is a professional-grade, high-CFU dry biological inoculant engineered to restore and enrich soil biology for commercial growers. Laboratory-cultured for total biological enumeration and purity, Zel Tec delivers a potent consortium of bacteria, beneficial fungi, and endomycorrhizae that work synergistically to build lasting soil health.

KEY BENEFITS

- Exceptional root structure development and plant vitality
- Improved harvest yields in demanding growing environments
- Enhanced nutrient uptake and long-lasting nutrient retention
- Pathogen suppression and heat stress resistance
- Reduced need for pesticides and synthetic inputs
- Fast-acting biological support from first application
- OMRI Listed — suitable for certified organic programs
- Custom microbial blends available to grower specifications

GUARANTEED ANALYSIS

Constituent	Amount
Bacteria	1 Billion CFU/g
Fungi	1 Million CFU/g
Endomycorrhizae	11,700 prop/lb

PRODUCT DETAILS

Format	Dry Wettable Powder
Certification	OMRI Certified Organic
Application	Soil drench, irrigation, seed treatment
Crops	All commercial row, field & specialty crops
Custom Blends	Available on request

HOW IT WORKS

Bacteria

A robust population of 1 billion CFU per gram colonizes the root zone, cycling nutrients, solubilizing phosphorus, and producing natural growth hormones that drive root expansion and plant vigor.

Beneficial Fungi

1 million CFU/g of beneficial fungi decompose organic matter, improve soil structure, and work synergistically with bacteria to create a diverse, resilient soil food web.

Endomycorrhizae

At 11,700 propagules per pound, endomycorrhizal fungi penetrate root cells to form an extended nutrient and water absorption network — dramatically increasing the effective root surface area.
